

MY Photo Studio – How to Use

Contact: sarwarikamran6@gmail.com

Web: <https://ai.ticktock.space/apps/MYPhotoStudio>

Privacy: <https://ai.ticktock.space/apps/MYPhotoStudio/privacy.html>

1. Projects & auto-save

- Default project folder: ~/Studio Projects (changeable in Save panel by picking another folder).
- First Save Project... writes a .mysprj package. After that, the app auto-saves about every 45 seconds.
- Export PNG/JPEG/GIF/etc. remembers the last export folder and opens there next time.

2. Infinite canvas & zoom

- Zoom 5%–6400% via bottom slider, pinch, or Zoom tool.
- Place image layers outside the photo frame to join multiple photos.
- Tools → Expand Canvas to Fit Layers (or merge layers) grows the frame so joined photos become one surface.
- Mini-navigator (above the zoom bar): click to jump around when zoomed in.

3. Grok Image (Image 2)

- Tools → Grok Image... (⌘G)
- Paste your xAI API key (console.x.ai). It stays in Keychain only.
- Enter a prompt → Generate & place on the canvas.

4. Editing modules

- Editor: Photoshop-style brushes, selections, layers, text, crop, film/color.
- Design: Corel-style vectors, PowerClip, circuit / Multisim-style stamps.
- 3D Studio: models, flatten to laser / Design.
- GIF / Collage / Batch / Formats / Grab Photos / Print Lab.

5. Trial

- Free for 3 months from first launch, then App Store / paid unlock.

6. Install / uninstall

- Run the installer wizard: it uninstalls leftovers first, asks for install location, then Finish.
- Permissions: Photos / Files as prompted in System Settings.
